

Seating Arrangement Puzzles — Medium (100 problems)

Generated: Medium difficulty puzzles covering Linear, Circular, Parallel Rows, Square and Rectangular arrangements.

Problem 1: Square Table (4 sides) — 8 seats

Clues: 1. Rohan sits at the north side of the table. 2. Vivaan is seated between Rohan and Chitra. 3. Krishna sits immediately to the left of Rohan. 4. Rohan sits immediately to the left of Vivaan. 5. Maya is 2 places clockwise from Diya. 6. There are 2 people seated clockwise from Diya to Karan, not counting endpoints.

Sample Questions (answers in Solutions section):

- How many people are seated clockwise from Karan to Vivaan, not counting endpoints?
- Who sits at position 5 (from left, 1-indexed)?
- Who sits immediately to the left of Chitra?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Rohan sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Vivaan is seated between Rohan and Chitra." to place adjacent relationships. Use clue: "Krishna sits immediately to the left of Rohan." to place adjacent relationships. Use clue: "Rohan sits immediately to the left of Vivaan." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Maya is 2 places clockwise from Diya." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Diya to Karan, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Rohan, Vivaan, Chitra, Diya, Sara, Maya, Karan, Krishna. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 2: Square Table (4 sides) — 8 seats

Clues: 1. Kabir sits at the north side of the table. 2. Ritu sits immediately to the left of Krishna. 3. Krishna sits immediately to the right of Ritu. 4. Neeraj sits immediately to the left of Priya. 5. Sameer is 2 places clockwise from Ishaan. 6. There are 1 people seated clockwise from Krishna to Kabir, not counting endpoints.

Sample Questions (answers in Solutions section):

- How many people are seated clockwise from Priya to Krishna, not counting endpoints?
- How many people are seated clockwise from Ritu to Priya, not counting endpoints?
- Who sits immediately to the right of Sameer?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Kabir sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Ritu sits immediately to the left of Krishna." to place adjacent relationships. Use clue: "Krishna sits immediately to the right of Ritu." to place adjacent relationships. Use clue: "Neeraj sits immediately to the left of Priya." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Sameer is 2 places clockwise from Ishaan." to determine distances between persons. Use clue: "There are 1 people seated clockwise from Krishna to Kabir, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Kabir, Sameer, Diya, Neeraj, Priya, Ritu, Krishna, Ishaan. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 3: Linear (single row, facing North) — 7 seats

Clues: 1. Kriti sits at the leftmost end of the row. 2. Maya is seated between Ishaan and Krishna. 3. Ishaan sits immediately to the right of Tara. 4. Tara sits immediately to the left of Ishaan. 5. Tara is 3 places to the right of Harsh. 6. There are 0 people seated clockwise from Harsh to Diya, not counting endpoints. 7. Maya sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Krishna?
- Who sits immediately to the right of Krishna?
- Who sits immediately to the right of Tara?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Kriti sits at the leftmost end of the row." to place fixed person(s). Use clue: "Maya sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Maya is seated between Ishaan and Krishna." to place adjacent relationships. Use clue: "Ishaan sits immediately to the right of Tara." to place adjacent relationships. Use clue: "Tara sits immediately to the left of Ishaan." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Tara is 3 places to the right of Harsh." to determine distances between persons. Use clue: "There are 0 people seated clockwise from Harsh to Diya, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Kriti, Tara, Ishaan, Maya, Krishna, Harsh, Diya. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 4: Circular (facing Outside) — 10 seats

Clues: 1. Vijay is at the 12 o'clock position. 2. Yash sits immediately to the right of Arjun. 3. Vijay sits immediately to the left of Lokesh. 4. Ritu is seated between Aditya and Vijay. 5. Vijay is 7 places clockwise from Maya. 6. There are 8 people seated clockwise from Yash to Arjun, not counting endpoints. 7. Vijay sits opposite Rahul.

Sample Questions (answers in Solutions section):

- Who sits at position 3 (from left, 1-indexed)?
- Who sits opposite Sonal?
- Who sits immediately to the right of Aditya?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Vijay is at the 12 o'clock position." to place fixed person(s). Use clue: "Vijay sits opposite Rahul." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Yash sits immediately to the right of Arjun." to place adjacent relationships. Use clue: "Vijay sits immediately to the left of Lokesh." to place adjacent relationships. Use clue: "Ritu is seated between Aditya and Vijay." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Vijay is 7 places clockwise from Maya." to determine distances between persons. Use clue: "There are 8 people seated clockwise from Yash to Arjun, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Vijay, Lokesh, Sonal, Maya, Suresh, Rahul, Arjun, Yash, Aditya, Ritu. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 5: Parallel Rows (two rows facing each other) — 10 seats

Clues: 1. Chitra sits opposite Manish. 2. Chitra sits immediately to the left of Geeta. 3. Chitra sits immediately to the left of Geeta. 4. Kabir is seated between Geeta and Ritu. 5. Geeta is 2 places clockwise from Meera. 6. There are 0 people seated clockwise from Maya to Karan, not counting endpoints.

Sample Questions (answers in Solutions section):

- How many people are seated clockwise from Karan to Kavya, not counting endpoints?
- Who sits opposite Kavya?
- Who sits immediately to the left of Geeta?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Chitra sits opposite Manish." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Chitra sits immediately to the left of Geeta." to place adjacent relationships. Use clue: "Chitra sits immediately to the left of Geeta." to place adjacent relationships. Use clue: "Kabir is seated between Geeta and Ritu." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Geeta is 2 places clockwise from Meera." to determine distances between persons. Use clue: "There are 0 people seated clockwise from Maya to Karan, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Chitra, Geeta, Kabir, Ritu, Nikhil, Manish, Maya, Karan, Kavya, Meera. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 6: Square Table (4 sides) — 8 seats

Clues: 1. Nandini sits at the north side of the table. 2. Raj sits immediately to the right of Diya. 3. Nandini is seated between Kabir and Ritu. 4. Diya is seated between Ritu and Raj. 5. Kabir is 3 places clockwise from Sameer. 6. There are 0 people seated clockwise from Diya to Raj, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Nandini?
- How many people are seated clockwise from Rohan to Raj, not counting endpoints?
- Who sits immediately to the left of Ritu?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Nandini sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Raj sits immediately to the right of Diya." to place adjacent relationships. Use clue: "Nandini is seated between Kabir and Ritu." to place adjacent relationships. Use clue: "Diya is seated between Ritu and Raj." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Kabir is 3 places clockwise from Sameer." to determine distances between persons. Use clue: "There are 0 people seated clockwise from Diya to Raj, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Nandini, Ritu, Diya, Raj, Sameer, Rohan, Tara, Kabir. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 7: Circular (facing Centre) — 12 seats

Clues: 1. Nisha is at the 12 o'clock position. 2. Asha sits immediately to the right of Karan. 3. Meera sits immediately to the left of Sai. 4. Rekha is seated between Ritu and Ishaan. 5. Sai is 5 places clockwise from Ritu. 6. There are 4 people seated clockwise from Asha to Rekha, not counting endpoints. 7. Nisha sits opposite Lokesh.

Sample Questions (answers in Solutions section):

- Who sits at position 11 (from left, 1-indexed)?
- Who sits opposite Meera?
- How many people are seated clockwise from Meera to Sara, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Nisha is at the 12 o'clock position." to place fixed person(s). Use clue: "Nisha sits opposite Lokesh." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Asha sits immediately to the right of Karan." to place adjacent relationships. Use clue: "Meera sits immediately to the left of Sai." to place adjacent relationships. Use clue: "Rekha is seated between Ritu and Ishaan." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Sai is 5 places clockwise from Ritu." to determine distances between persons. Use clue: "There are 4 people seated clockwise from Asha to Rekha, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Nisha, Sara, Arjun, Ritu, Rekha, Ishaan, Lokesh, Meera, Sai, Nandini, Karan, Asha. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 8: Linear (single row, facing South) — 7 seats

Clues: 1. Yash sits at the leftmost end of the row. 2. Sai sits immediately to the left of Sameer. 3. Sai is seated between Yash and Sameer. 4. Sai sits immediately to the left of Sameer. 5. Geeta is 3 places to the right of Sai. 6. There are 4 people seated clockwise from Sai to Maya, not counting endpoints. 7. Geeta sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Vivaan?
- Who sits at position 2 (from left, 1-indexed)?
- How many people are seated clockwise from Sameer to Maya, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Yash sits at the leftmost end of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Sai sits immediately to the left of Sameer." to place adjacent relationships. Use clue: "Sai is seated between Yash and Sameer." to place adjacent relationships. Use clue: "Sai sits immediately to the left of Sameer." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Geeta is 3 places to the right of Sai." to determine distances between persons. Use clue: "There are 4 people seated clockwise from Sai to Maya, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Sai, Sameer, Vivaan, Geeta, Sonal, Maya, Yash. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 9: Parallel Rows (two rows facing each other) — 12 seats

Clues: 1. Leela sits opposite Lokesh. 2. Deepak is seated between Lokesh and Kabir. 3. Raj is seated between Vikram and Yash. 4. Sara sits immediately to the right of Leela. 5. Lokesh is 7 places clockwise from Yash. 6. There are 2 people seated clockwise from Sara to Ananya, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Siddharth?
- How many people are seated clockwise from Deepak to Kriti, not counting endpoints?
- Who sits at position 3 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Leela sits opposite Lokesh." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Deepak is seated between Lokesh and Kabir." to place adjacent relationships. Use clue: "Raj is seated between Vikram and Yash." to place adjacent relationships. Use clue: "Sara sits immediately to the right of Leela." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Lokesh is 7 places clockwise from Yash." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Sara to Ananya, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Leela, Sara, Kriti, Siddharth, Ananya, Krishna, Lokesh, Deepak, Kabir, Vikram, Raj, Yash. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 10: Circular (facing Centre) — 10 seats

Clues: 1. Sai is at the 12 o'clock position. 2. Krishna sits immediately to the right of Sonal. 3. Ishaan sits immediately to the right of Aarav. 4. Arjun sits immediately to the right of Krishna. 5. Krishna is 3 places clockwise from Sai. 6. There are 3 people seated clockwise from Nandini to Sai, not counting endpoints. 7. Sai sits opposite Raj.

Sample Questions (answers in Solutions section):

- Who sits at position 5 (from left, 1-indexed)?
- Who sits at position 5 (from left, 1-indexed)?
- Who sits at position 9 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Sai is at the 12 o'clock position." to place fixed person(s). Use clue: "Sai sits opposite Raj." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Krishna sits immediately to the right of Sonal." to place adjacent relationships. Use clue: "Ishaan sits immediately to the right of Aarav." to place adjacent relationships. Use clue: "Arjun sits immediately to the right of Krishna." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Krishna is 3 places clockwise from Sai." to determine distances between persons. Use clue: "There are 3 people seated clockwise from Nandini to Sai, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Sai, Varun, Sonal, Krishna, Arjun, Raj, Nandini, Aarav, Ishaan, Sara. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 11: Square Table (4 sides) — 8 seats

Clues: 1. Prateek sits at the north side of the table. 2. Prateek is seated between Geeta and Meera. 3. Geeta sits immediately to the left of Prateek. 4. Geeta is seated between Arjun and Prateek. 5. Tara is 2 places clockwise from Neeraj. 6. There are 5 people seated clockwise from Meera to Geeta, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Meera?
- How many people are seated clockwise from Meera to Priya, not counting endpoints?
- Who sits immediately to the right of Arjun?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Prateek sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Prateek is seated between Geeta and Meera." to place adjacent relationships. Use clue: "Geeta sits immediately to the left of Prateek." to place adjacent relationships. Use clue: "Geeta is seated between Arjun and Prateek." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Tara is 2 places clockwise from Neeraj." to determine distances between persons. Use clue: "There are 5 people seated clockwise from Meera to Geeta, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Prateek, Meera, Neeraj, Ananya, Tara, Priya, Arjun, Geeta. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 12: Linear (single row, facing North) — 10 seats

Clues: 1. Sara sits at the leftmost end of the row. 2. Rekha sits immediately to the right of Ritu. 3. Aditya sits immediately to the left of Asha. 4. Asha sits immediately to the left of Ishaan. 5. Rekha is 5 places to the right of Asha. 6. There are 2 people seated clockwise from Shreya to Ishaan, not counting endpoints. 7. Ishaan sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits at position 6 (from left, 1-indexed)?
- Who sits immediately to the left of Sara?
- Who sits at position 10 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Sara sits at the leftmost end of the row." to place fixed person(s). Use clue: "Ishaan sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Rekha sits immediately to the right of Ritu." to place adjacent relationships. Use clue: "Aditya sits immediately to the left of Asha." to place adjacent relationships. Use clue: "Asha sits immediately to the left of Ishaan." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Rekha is 5 places to the right of Asha." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Shreya to Ishaan, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Sara, Geeta, Shreya, Aditya, Asha, Ishaan, Siddharth, Deepak, Ritu, Rekha. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 13: Parallel Rows (two rows facing each other) — 8 seats

Clues: 1. Sai sits opposite Anika. 2. Anika sits immediately to the right of Kavya. 3. Kavya sits immediately to the left of Anika. 4. Kriti is seated between Vikram and Sai. 5. Anika is 4 places clockwise from Sai. 6. There are 0 people seated clockwise from Nandini to Priya, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits opposite Nandini?
- Who sits immediately to the left of Priya?
- Who sits opposite Anika?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Sai sits opposite Anika." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Anika sits immediately to the right of Kavya." to place adjacent relationships. Use clue: "Kavva sits immediately to the left of Anika." to place adjacent relationships. Use clue: "Kriti is seated between Vikram and Sai." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Anika is 4 places clockwise from Sai." to determine distances between persons. Use clue: "There are 0 people seated clockwise from Nandini to Priya, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Sai, Nandini, Priya, Kavva, Anika, Karan, Vikram, Kriti. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 14: Parallel Rows (two rows facing each other) — 8 seats

Clues: 1. Prateek sits opposite Vijay. 2. Suresh sits immediately to the left of Vijay. 3. Sameer is seated between Prateek and Priya. 4. Suresh sits immediately to the left of Vijay. 5. Vijay is 4 places clockwise from Prateek. 6. There are 3 people seated clockwise from Priya to Kavva, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits opposite Priya?
- Who sits at position 7 (from left, 1-indexed)?
- How many people are seated clockwise from Prateek to Meera, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Prateek sits opposite Vijay." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Suresh sits immediately to the left of Vijay." to place adjacent relationships. Use clue: "Sameer is seated between Prateek and Priya." to place adjacent relationships. Use clue: "Suresh sits immediately to the left of Vijay." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Vijay is 4 places clockwise from Prateek." to determine distances between persons. Use clue: "There are 3 people seated clockwise from Priya to Kavva, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Prateek, Sameer, Priya, Suresh, Vijay, Anika, Kavva, Meera. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 15: Linear (single row, facing North) — 7 seats

Clues: 1. Nandini sits at the leftmost end of the row. 2. Nandini sits immediately to the left of Aditya. 3. Geeta sits immediately to the right of Manish. 4. Neeraj sits immediately to the left of Kabir. 5. Sonal is 2 places to the right of Manish. 6. There are 2 people seated clockwise from Neeraj to Aditya, not counting endpoints. 7. Geeta sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Manish?
- How many people are seated clockwise from Kabir to Geeta, not counting endpoints?
- How many people are seated clockwise from Neeraj to Aditya, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Nandini sits at the leftmost end of the row." to place fixed person(s). Use clue: "Geeta sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Nandini sits immediately to the left of Aditya." to place adjacent relationships. Use clue: "Geeta sits immediately to the right of Manish." to place adjacent relationships. Use clue: "Neeraj sits immediately to the left of Kabir." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Sonal is 2 places to the right of Manish." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Neeraj to Aditya, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Nandini, Aditya, Manish, Geeta, Sonal, Neeraj, Kabir. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 16: Linear (single row, facing South) — 7 seats

Clues: 1. Deepak sits at the leftmost end of the row. 2. Deepak is seated between Ritu and Isha. 3. Siddharth sits immediately to the left of Vivaan. 4. Deepak is seated between Ritu and Isha. 5. Ritu is 2 places to the right of Kriti. 6. There are 3 people seated clockwise from Deepak to Kriti, not counting endpoints. 7. Kriti sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Siddharth?
- Who sits at position 3 (from left, 1-indexed)?
- Who sits opposite Deepak?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Deepak sits at the leftmost end of the row." to place fixed person(s). Use clue: "Kriti sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Deepak is seated between Ritu and Isha." to place adjacent relationships. Use clue: "Siddharth sits immediately to the left of Vivaan." to place adjacent relationships. Use clue: "Deepak is seated between Ritu and Isha." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Ritu is 2 places to the right of Kriti." to determine distances between persons. Use clue: "There are 3 people seated clockwise from Deepak to Kriti, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Isha, Siddharth, Vivaan, Kriti, Sameer, Ritu, Deepak. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 17: Rectangular Table (opposite facing) — 8 seats

Clues: 1. Maya sits at the north side of the table. 2. Sameer sits immediately to the right of Nikhil. 3. Diya is seated between Sameer and Sai. 4. Nikhil sits immediately to the left of Sameer. 5. Sameer is 4 places clockwise from Vivaan. 6. There are 2 people seated clockwise from Deepak to Sameer, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits opposite Maya?
- Who sits immediately to the left of Diya?
- Who sits opposite Sameer?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Maya sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Sameer sits immediately to the right of Nikhil." to place adjacent relationships. Use clue: "Diya is seated between Sameer and Sai." to place adjacent relationships. Use clue: "Nikhil sits immediately to the left of Sameer." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Sameer is 4 places clockwise from Vivaan." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Deepak to Sameer, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Maya, Vivaan, Deepak, Ananya, Nikhil, Sameer, Diya, Sai. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 18: Circular (facing Outside) — 10 seats

Clues: 1. Kavya is at the 12 o'clock position. 2. Aarav is seated between Kabir and Pooja. 3. Ananya sits immediately to the right of Rekha. 4. Anika sits immediately to the left of Aditya. 5. Rohan is 6 places clockwise from Anika. 6. There are 5 people seated clockwise from Anika to Rohan, not counting endpoints. 7. Kavya sits opposite Anika.

Sample Questions (answers in Solutions section):

- Who sits opposite Aarav?
- Who sits opposite Aditya?
- Who sits opposite Aditya?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Kavya is at the 12 o'clock position." to place fixed person(s). Use clue: "Kavya sits opposite Anika." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Aarav is seated between Kabir and Pooja." to place adjacent relationships. Use clue: "Ananya sits immediately to the right of Rekha." to place adjacent relationships. Use clue: "Anika sits immediately to the left of Aditya." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Rohan is 6 places clockwise from Anika." to determine distances between persons. Use clue: "There are 5 people seated clockwise from Anika to Rohan, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Kavya, Rohan, Harsh, Rekha, Ananya, Anika, Aditya, Kabir, Aarav, Pooja. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 19: Square Table (4 sides) — 8 seats

Clues: 1. Tara sits at the north side of the table. 2. Deepak sits immediately to the right of Siddharth. 3. Sonal sits immediately to the right of Tara. 4. Ananya sits immediately to the left of Siddharth. 5. Karan is 4 places clockwise from Harsh. 6. There are 3 people seated clockwise from Isha to Ananya, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits at position 4 (from left, 1-indexed)?
- How many people are seated clockwise from Isha to Harsh, not counting endpoints?
- Who sits immediately to the right of Sonal?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Tara sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Deepak sits immediately to the right of Siddharth." to place adjacent relationships. Use clue: "Sonal sits immediately to the right of Tara." to place adjacent relationships. Use clue: "Ananya sits immediately to the left of Siddharth." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Karan is 4 places clockwise from Harsh." to determine distances between persons. Use clue: "There are 3 people seated clockwise from Isha to Ananya, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Tara, Sonal, Karan, Ananya, Siddharth, Deepak, Harsh, Isha. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 20: Circular (facing Centre) — 10 seats

Clues: 1. Deepak is at the 12 o'clock position. 2. Vijay sits immediately to the left of Asha. 3. Ananya sits immediately to the left of Deepak. 4. Nisha is seated between Suresh and Maya. 5. Suresh is 5 places clockwise from Vijay. 6. There are 6 people seated clockwise from Suresh to Sameer, not counting endpoints. 7. Deepak sits opposite Sara.

Sample Questions (answers in Solutions section):

- Who sits at position 8 (from left, 1-indexed)?
- Who sits at position 4 (from left, 1-indexed)?
- Who sits immediately to the right of Deepak?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Deepak is at the 12 o'clock position." to place fixed person(s). Use clue: "Deepak sits opposite Sara." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Vijay sits immediately to the left of Asha." to place adjacent relationships. Use clue: "Ananya sits immediately to the left of Deepak." to place adjacent relationships. Use clue: "Nisha is seated between Suresh and Maya." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Suresh is 5 places clockwise from Vijay." to determine distances between persons. Use clue: "There are 6 people seated clockwise from Suresh to Sameer, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Deepak, Vijay, Asha, Sameer, Ishaan, Sara, Suresh, Nisha, Maya, Ananya. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 21: Rectangular Table (opposite facing) — 8 seats

Clues: 1. Kriti sits at the north side of the table. 2. Maya sits immediately to the left of Isha. 3. Amit sits immediately to the left of Arjun. 4. Arjun is seated between Amit and Kriti. 5. Maya is 5 places clockwise from Pooja. 6. There are 0 people seated clockwise from Amit to Arjun, not counting endpoints.

Sample Questions (answers in Solutions section):

- How many people are seated clockwise from Arjun to Kabir, not counting endpoints?
- Who sits at position 8 (from left, 1-indexed)?
- Who sits opposite Isha?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Kriti sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Maya sits immediately to the left of Isha." to place adjacent relationships. Use clue: "Amit sits immediately to the left of Arjun." to place adjacent relationships. Use clue: "Arjun is seated between Amit and Kriti." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Maya is 5 places clockwise from Pooja." to determine distances between persons. Use clue: "There are 0 people seated clockwise from Amit to Arjun, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Kriti, Kabir, Maya, Isha, Lokesh, Pooja, Amit, Arjun. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 22: Rectangular Table (opposite facing) — 12 seats

Clues: 1. Diya sits at the north side of the table. 2. Kriti is seated between Sara and Varun. 3. Pooja sits immediately to the left of Meera. 4. Sara sits immediately to the right of Vijay. 5. Vijay is 4 places clockwise from Sameer. 6. There are 3 people seated clockwise from Sameer to Vijay, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Varun?
- Who sits at position 6 (from left, 1-indexed)?
- How many people are seated clockwise from Sai to Varun, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Diya sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Kriti is seated between Sara and Varun." to place adjacent relationships. Use clue: "Pooja sits immediately to the left of Meera." to place adjacent relationships. Use clue: "Sara sits immediately to the right of Vijay." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Vijay is 4 places clockwise from Sameer." to determine distances between persons. Use clue: "There are 3 people seated clockwise from Sameer to Vijay, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Diya, Pooja, Meera, Vijay, Sara, Kriti, Varun, Sai, Tara, Prateek, Lokesh, Sameer. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 23: Linear (single row, facing North) — 7 seats

Clues: 1. Siddharth sits at the leftmost end of the row. 2. Geeta sits immediately to the left of Lokesh. 3. Lokesh sits immediately to the right of Geeta. 4. Siddharth sits immediately to the right of Ritu. 5. Geeta is 3 places to the right of Ritu. 6. There are 1 people seated clockwise from Vivaan to Ritu, not counting endpoints. 7. Lokesh sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- How many people are seated clockwise from Ritu to Vivaan, not counting endpoints?
- Who sits immediately to the right of Lokesh?
- Who sits immediately to the right of Geeta?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Siddharth sits at the leftmost end of the row." to place fixed person(s). Use clue: "Lokesh sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Geeta sits immediately to the left of Lokesh." to place adjacent relationships. Use clue: "Lokesh sits immediately to the right of Geeta." to place adjacent relationships. Use clue: "Siddharth sits immediately to the right of Ritu." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Geeta is 3 places to the right of Ritu." to determine distances between persons. Use clue: "There are 1 people seated clockwise from Vivaan to Ritu, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Siddharth, Harsh, Geeta, Lokesh, Vivaan, Rekha, Ritu. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 24: Circular (facing Outside) — 10 seats

Clues: 1. Sameer is at the 12 o'clock position. 2. Karan is seated between Amit and Asha. 3. Vivaan sits immediately to the left of Sameer. 4. Amit sits immediately to the left of Karan. 5. Sameer is 3 places clockwise from Asha. 6. There are 4 people seated clockwise from Sameer to Amit, not counting endpoints. 7. Sameer sits opposite Amit.

Sample Questions (answers in Solutions section):

- Who sits at position 6 (from left, 1-indexed)?
- Who sits immediately to the right of Asha?
- Who sits opposite Amit?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Sameer is at the 12 o'clock position." to place fixed person(s). Use clue: "Sameer sits opposite Amit." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Karan is seated between Amit and Asha." to place adjacent relationships. Use clue: "Vivaan sits immediately to the left of Sameer." to place adjacent relationships. Use clue: "Amit sits immediately to the left of Karan." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Sameer is 3 places clockwise from Asha." to determine distances between persons. Use clue: "There are 4 people seated clockwise from Sameer to Amit, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Sameer, Deepak, Suresh, Nikhil, Ria, Amit, Karan, Asha, Nandini, Vivaan. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 25: Rectangular Table (opposite facing) — 10 seats

Clues: 1. Diya sits at the north side of the table. 2. Anika is seated between Siddharth and Ishaan. 3. Vikram sits immediately to the left of Diya. 4. Siddharth sits immediately to the left of Anika. 5. Vivaan is 6 places clockwise from Diya. 6. There are 1 people seated clockwise from Siddharth to Ishaan, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Nandini?
- Who sits immediately to the left of Vikram?
- Who sits immediately to the right of Nandini?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Diya sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Anika is seated between Siddharth and Ishaan." to place adjacent relationships. Use clue: "Vikram sits immediately to the left of Diya." to place adjacent relationships. Use clue: "Siddharth sits immediately to the left of Anika." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Vivaan is 6 places clockwise from Diya." to determine distances between persons. Use clue: "There are 1 people seated clockwise from Siddharth to Ishaan, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Diya, Ritu, Siddharth, Anika, Ishaan, Leela, Vivaan, Nandini, Arjun, Vikram. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 26: Square Table (4 sides) — 8 seats

Clues: 1. Anika sits at the north side of the table. 2. Manish is seated between Anika and Ria. 3. Yash is seated between Shreya and Rohan. 4. Chitra is seated between Rohan and Nisha. 5. Yash is 3 places clockwise from Manish. 6. There are 4 people seated clockwise from Manish to Chitra, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits opposite Manish?
- How many people are seated clockwise from Anika to Ria, not counting endpoints?
- How many people are seated clockwise from Chitra to Rohan, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Anika sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Manish is seated between Anika and Ria." to place adjacent relationships. Use clue: "Yash is seated between Shreya and Rohan." to place adjacent relationships. Use clue: "Chitra is seated between Rohan and Nisha." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Yash is 3 places clockwise from Manish." to determine distances between persons. Use clue: "There are 4 people seated clockwise from Manish to Chitra, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Anika, Manish, Ria, Shreya, Yash, Rohan, Chitra, Nisha. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 27: Circular (facing Centre) — 6 seats

Clues: 1. Kavya is at the 12 o'clock position. 2. Raj sits immediately to the right of Kavya. 3. Sameer is seated between Raj and Aarav. 4. Siddharth sits immediately to the left of Meera. 5. Meera is 2 places clockwise from Aarav. 6. Kavya sits opposite Aarav.

Sample Questions (answers in Solutions section):

- How many people are seated clockwise from Meera to Sameer, not counting endpoints?
- How many people are seated clockwise from Siddharth to Aarav, not counting endpoints?
- Who sits at position 4 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Kavya is at the 12 o'clock position." to place fixed person(s). Use clue: "Kavya sits opposite Aarav." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Raj sits immediately to the right of Kavya." to place adjacent relationships. Use clue: "Sameer is seated between Raj and Aarav." to place adjacent relationships. Use clue: "Siddharth sits immediately to the left of Meera." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Meera is 2 places clockwise from Aarav." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Kavya, Raj, Sameer, Aarav, Siddharth, Meera. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 28: Rectangular Table (opposite facing) — 12 seats

Clues: 1. Geeta sits at the north side of the table. 2. Ishaan sits immediately to the left of Ritu. 3. Amit sits immediately to the right of Yash. 4. Sara sits immediately to the right of Rahul. 5. Asha is 7 places clockwise from Sara. 6. There are 1 people seated clockwise from Ishaan to Varun, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits opposite Rekha?
- Who sits opposite Amit?
- Who sits immediately to the left of Amit?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Geeta sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Ishaan sits immediately to the left of Ritu." to place adjacent relationships. Use clue: "Amit sits immediately to the right of Yash." to place adjacent relationships. Use clue: "Sara sits immediately to the right of Rahul." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Asha is 7 places clockwise from Sara." to determine distances between persons. Use clue: "There are 1 people seated clockwise from Ishaan to Varun, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Geeta, Diya, Rahul, Sara, Ishaan, Ritu, Varun, Yash, Amit, Rekha, Asha, Harsh Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 29: Linear (single row, facing South) — 6 seats

Clues: 1. Kriti sits at the leftmost end of the row. 2. Sara sits immediately to the right of Kriti. 3. Kriti is seated between Sonal and Sara. 4. Siddharth sits immediately to the left of Meera. 5. Meera is 3 places to the right of Sara. 6. Meera sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Meera?
- Who sits immediately to the right of Siddharth?
- How many people are seated clockwise from Siddharth to Meera, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Kriti sits at the leftmost end of the row." to place fixed person(s). Use clue: "Meera sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Sara sits immediately to the right of Kriti." to place adjacent relationships. Use clue: "Kriti is seated between Sonal and Sara." to place adjacent relationships. Use clue: "Siddharth sits immediately to the left of Meera." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Meera is 3 places to the right of Sara." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Sara, Yash, Siddharth, Meera, Sonal, Kriti Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 30: Parallel Rows (two rows facing each other) — 12 seats

Clues: 1. Vikram sits opposite Amit. 2. Maya sits immediately to the left of Rohan. 3. Sameer sits immediately to the left of Kriti. 4. Rohan is seated between Maya and Vikram. 5. Nisha is 5 places clockwise from Sonal. 6. There are 7 people seated clockwise from Rohan to Diya, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits opposite Rohan?
- How many people are seated clockwise from Nisha to Anika, not counting endpoints?
- Who sits opposite Kabir?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Vikram sits opposite Amit." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Maya sits immediately to the left of Rohan." to place adjacent relationships. Use clue: "Sameer sits immediately to the left of Kriti." to place adjacent relationships. Use clue: "Rohan is seated between Maya and Vikram." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Nisha is 5 places clockwise from Sonal." to determine distances between persons. Use clue: "There are 7 people seated clockwise from Rohan to Diya, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Vikram, Kabir, Chitra, Sonal, Sameer, Kriti, Amit, Diya, Nisha, Anika, Maya, Rohan Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 31: Rectangular Table (opposite facing) — 8 seats

Clues: 1. Tara sits at the north side of the table. 2. Isha sits immediately to the left of Nisha. 3. Tara is seated between Karan and Maya. 4. Manish is seated between Maya and Isha. 5. Isha is 2 places clockwise from Maya. 6. There are 6 people seated clockwise from Nisha to Isha, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits at position 8 (from left, 1-indexed)?
- Who sits opposite Manish?
- Who sits immediately to the left of Nisha?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Tara sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Isha sits immediately to the left of Nisha." to place adjacent relationships. Use clue: "Tara is seated between Karan and Maya." to place adjacent relationships. Use clue: "Manish is seated between Maya and Isha." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Isha is 2 places clockwise from Maya." to determine distances between persons. Use clue: "There are 6 people seated clockwise from Nisha to Isha, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Tara, Maya, Manish, Isha, Nisha, Aarav, Nandini, Karan. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 32: Rectangular Table (opposite facing) — 10 seats

Clues: 1. Rohan sits at the north side of the table. 2. Rohan sits immediately to the right of Raj. 3. Rohan sits immediately to the left of Sai. 4. Sai is seated between Rohan and Nikhil. 5. Nikhil is 6 places clockwise from Vijay. 6. There are 3 people seated clockwise from Raj to Meera, not counting endpoints.

Sample Questions (answers in Solutions section):

- How many people are seated clockwise from Vijay to Arjun, not counting endpoints?
- Who sits at position 5 (from left, 1-indexed)?
- How many people are seated clockwise from Vijay to Ritu, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Rohan sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Rohan sits immediately to the right of Raj." to place adjacent relationships. Use clue: "Rohan sits immediately to the left of Sai." to place adjacent relationships. Use clue: "Sai is seated between Rohan and Nikhil." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Nikhil is 6 places clockwise from Vijay." to determine distances between persons. Use clue: "There are 3 people seated clockwise from Raj to Meera, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Rohan, Sai, Nikhil, Meera, Ritu, Rekha, Vijay, Arjun, Neeraj, Raj. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 33: Parallel Rows (two rows facing each other) — 12 seats

Clues: 1. Arjun sits opposite Prateek. 2. Anika sits immediately to the left of Ishaan. 3. Asha sits immediately to the left of Chitra. 4. Anika sits immediately to the right of Prateek. 5. Ishaan is 9 places clockwise from Isha. 6. There are 7 people seated clockwise from Priya to Arjun, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Priya?
- Who sits opposite Isha?
- Who sits at position 2 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Arjun sits opposite Prateek." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Anika sits immediately to the left of Ishaan." to place adjacent relationships. Use clue: "Asha sits immediately to the left of Chitra." to place adjacent relationships. Use clue: "Anika sits immediately to the right of Prateek." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Ishaan is 9 places clockwise from Isha." to determine distances between persons. Use clue: "There are 7 people seated clockwise from Priya to Arjun, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Arjun, Asha, Chitra, Krishna, Priya, Vijay, Prateek, Anika, Ishaan, Ria, Sara, Isha. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 34: Square Table (4 sides) — 8 seats

Clues: 1. Maya sits at the north side of the table. 2. Geeta is seated between Vijay and Deepak. 3. Geeta sits immediately to the left of Deepak. 4. Maya sits immediately to the left of Anika. 5. Kabir is 4 places clockwise from Vijay. 6. There are 6 people seated clockwise from Deepak to Geeta, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Rohan?
- Who sits opposite Kabir?
- Who sits opposite Rohan?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Maya sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Geeta is seated between Vijay and Deepak." to place adjacent relationships. Use clue: "Geeta sits immediately to the left of Deepak." to place adjacent relationships. Use clue: "Maya sits immediately to the left of Anika." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Kabir is 4 places clockwise from Vijay." to determine distances between persons. Use clue: "There are 6 people seated clockwise from Deepak to Geeta, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Maya, Anika, Vijay, Geeta, Deepak, Ananya, Kabir, Rohan. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 35: Circular (facing Outside) — 6 seats

Clues: 1. Shreya is at the 12 o'clock position. 2. Anika sits immediately to the left of Shreya. 3. Aditya is seated between Shreya and Kabir. 4. Rahul sits immediately to the left of Kriti. 5. Kabir is 3 places clockwise from Anika. 6. Shreya sits opposite Rahul.

Sample Questions (answers in Solutions section):

- How many people are seated clockwise from Shreya to Aditya, not counting endpoints?
- Who sits at position 5 (from left, 1-indexed)?
- Who sits at position 3 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Shreya is at the 12 o'clock position." to place fixed person(s). Use clue: "Shreya sits opposite Rahul." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Anika sits immediately to the left of Shreya." to place adjacent relationships. Use clue: "Aditya is seated between Shreya and Kabir." to place adjacent relationships. Use clue: "Rahul sits immediately to the left of Kriti." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Kabir is 3 places clockwise from Anika." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Shreya, Aditya, Kabir, Rahul, Kriti, Anika. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 36: Linear (single row, facing South) — 10 seats

Clues: 1. Krishna sits at the leftmost end of the row. 2. Ishaan sits immediately to the right of Meera. 3. Siddharth is seated between Vikram and Sameer. 4. Leela is seated between Ishaan and Vikram. 5. Kabir is 2 places to the right of Rahul. 6. There are 3 people seated clockwise from Sameer to Vijay, not counting endpoints. 7. Vikram sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits opposite Leela?
- Who sits opposite Vijay?
- Who sits at position 9 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Krishna sits at the leftmost end of the row." to place fixed person(s). Use clue: "Vikram sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Ishaan sits immediately to the right of Meera." to place adjacent relationships. Use clue: "Siddharth is seated between Vikram and Sameer." to place adjacent relationships. Use clue: "Leela is seated between Ishaan and Vikram." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Kabir is 2 places to the right of Rahul." to determine distances between persons. Use clue: "There are 3 people seated clockwise from Sameer to Vijay, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Kabir, Vijay, Meera, Ishaan, Leela, Vikram, Siddharth, Sameer, Rahul, Krishna. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 37: Rectangular Table (opposite facing) — 8 seats

Clues: 1. Deepak sits at the north side of the table. 2. Manish is seated between Pooja and Deepak. 3. Manish sits immediately to the left of Deepak. 4. Arjun is seated between Siddharth and Ananya. 5. Nandini is 5 places clockwise from Arjun. 6. There are 0 people seated clockwise from Manish to Deepak, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Siddharth?
- Who sits immediately to the right of Arjun?
- How many people are seated clockwise from Deepak to Arjun, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Deepak sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Manish is seated between Pooja and Deepak." to place adjacent relationships. Use clue: "Manish sits immediately to the left of Deepak." to place adjacent relationships. Use clue: "Arjun is seated between Siddharth and Ananya." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Nandini is 5 places clockwise from Arjun." to determine distances between persons. Use clue: "There are 0 people seated clockwise from Manish to Deepak, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Deepak, Nandini, Amit, Siddharth, Arjun, Ananya, Pooja, Manish Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 38: Circular (facing Outside) — 6 seats

Clues: 1. Maya is at the 12 o'clock position. 2. Ritu is seated between Amit and Raj. 3. Raj is seated between Ritu and Neeraj. 4. Raj sits immediately to the right of Ritu. 5. Neeraj is 2 places clockwise from Ritu. 6. Maya sits opposite Ritu.

Sample Questions (answers in Solutions section):

- Who sits at position 5 (from left, 1-indexed)?
- Who sits immediately to the right of Ritu?
- Who sits immediately to the right of Raj?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Maya is at the 12 o'clock position." to place fixed person(s). Use clue: "Maya sits opposite Ritu." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Ritu is seated between Amit and Raj." to place adjacent relationships. Use clue: "Raj is seated between Ritu and Neeraj." to place adjacent relationships. Use clue: "Raj sits immediately to the right of Ritu." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Neeraj is 2 places clockwise from Ritu." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Maya, Rohan, Amit, Ritu, Raj, Neeraj Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 39: Parallel Rows (two rows facing each other) — 12 seats

Clues: 1. Karan sits opposite Chitra. 2. Asha sits immediately to the right of Geeta. 3. Siddharth sits immediately to the right of Diya. 4. Nisha sits immediately to the right of Tara. 5. Karan is 7 places clockwise from Kavya. 6. There are 0 people seated clockwise from Tara to Nisha, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits at position 8 (from left, 1-indexed)?
- Who sits opposite Siddharth?
- Who sits immediately to the right of Nisha?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Karan sits opposite Chitra." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Asha sits immediately to the right of Geeta." to place adjacent relationships. Use clue: "Siddharth sits immediately to the right of Diya." to place adjacent relationships. Use clue: "Nisha sits immediately to the right of Tara." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Karan is 7 places clockwise from Kavya." to determine distances between persons. Use clue: "There are 0 people seated clockwise from Tara to Nisha, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Karan, Sai, Diya, Siddharth, Sameer, Kavya, Chitra, Aarav, Tara, Nisha, Geeta, Asha Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 40: Circular (facing Outside) — 7 seats

Clues: 1. Siddharth is at the 12 o'clock position. 2. Harsh is seated between Prateek and Lokesh. 3. Rahul sits immediately to the left of Leela. 4. Aditya is seated between Siddharth and Rahul. 5. Aditya is 2 places clockwise from Lokesh. 6. There are 3 people seated clockwise from Lokesh to Leela, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Prateek?
- Who sits at position 1 (from left, 1-indexed)?
- Who sits immediately to the right of Leela?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Siddharth is at the 12 o'clock position." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Harsh is seated between Prateek and Lokesh." to place adjacent relationships. Use clue: "Rahul sits immediately to the left of Leela." to place adjacent relationships. Use clue: "Aditya is seated between Siddharth and Rahul." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Aditya is 2 places clockwise from Lokesh." to determine distances between persons. Use clue: "There are 3 people seated clockwise from Lokesh to Leela, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Siddharth, Aditya, Rahul, Leela, Prateek, Harsh, Lokesh. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 41: Rectangular Table (opposite facing) — 12 seats

Clues: 1. Neeraj sits at the north side of the table. 2. Asha is seated between Sameer and Nikhil. 3. Raj sits immediately to the left of Ishaan. 4. Ishaan sits immediately to the left of Prateek. 5. Prateek is 6 places clockwise from Anika. 6. There are 9 people seated clockwise from Anika to Sai, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits at position 2 (from left, 1-indexed)?
- Who sits immediately to the left of Raj?
- Who sits immediately to the right of Harsh?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Neeraj sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Asha is seated between Sameer and Nikhil." to place adjacent relationships. Use clue: "Raj sits immediately to the left of Ishaan." to place adjacent relationships. Use clue: "Ishaan sits immediately to the left of Prateek." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Prateek is 6 places clockwise from Anika." to determine distances between persons. Use clue: "There are 9 people seated clockwise from Anika to Sai, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Neeraj, Sai, Leela, Anika, Sameer, Asha, Nikhil, Raj, Ishaan, Prateek, Nandini, Harsh. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 42: Circular (facing Centre) — 6 seats

Clues: 1. Aditya is at the 12 o'clock position. 2. Arjun sits immediately to the left of Tara. 3. Rahul is seated between Aditya and Arjun. 4. Vikram is seated between Tara and Manish. 5. Tara is 2 places clockwise from Rahul. 6. Aditya sits opposite Tara.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Vikram?
- Who sits at position 5 (from left, 1-indexed)?
- Who sits immediately to the right of Tara?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Aditya is at the 12 o'clock position." to place fixed person(s). Use clue: "Aditya sits opposite Tara." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Arjun sits immediately to the left of Tara." to place adjacent relationships. Use clue: "Rahul is seated between Aditya and Arjun." to place adjacent relationships. Use clue: "Vikram is seated between Tara and Manish." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Tara is 2 places clockwise from Rahul." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Aditya, Rahul, Arjun, Tara, Vikram, Manish. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 43: Parallel Rows (two rows facing each other) — 8 seats

Clues: 1. Maya sits opposite Ritu. 2. Maya sits immediately to the right of Aarav. 3. Amit sits immediately to the left of Vijay. 4. Maya sits immediately to the right of Aarav. 5. Amit is 5 places clockwise from Ritu. 6. There are 6 people seated clockwise from Ritu to Anika, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits opposite Anika?
- Who sits at position 8 (from left, 1-indexed)?
- Who sits immediately to the left of Anika?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Maya sits opposite Ritu." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Maya sits immediately to the right of Aarav." to place adjacent relationships. Use clue: "Amit sits immediately to the left of Vijay." to place adjacent relationships. Use clue: "Maya sits immediately to the right of Aarav." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Amit is 5 places clockwise from Ritu." to determine distances between persons. Use clue: "There are 6 people seated clockwise from Ritu to Anika, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Maya, Amit, Vijay, Anika, Ritu, Yash, Deepak, Aarav. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 44: Circular (facing Outside) — 10 seats

Clues: 1. Vikram is at the 12 o'clock position. 2. Aarav is seated between Diya and Vikram. 3. Vikram is seated between Aarav and Rekha. 4. Diya sits immediately to the right of Nikhil. 5. Aarav is 6 places clockwise from Lokesh. 6. There are 7 people seated clockwise from Vivaan to Lokesh, not counting endpoints. 7. Vikram sits opposite Vivaan.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Aarav?
- Who sits opposite Tara?
- Who sits immediately to the left of Vikram?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Vikram is at the 12 o'clock position." to place fixed person(s). Use clue: "Vikram sits opposite Vivaan." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Aarav is seated between Diya and Vikram." to place adjacent relationships. Use clue: "Vikram is seated between Aarav and Rekha." to place adjacent relationships. Use clue: "Diya sits immediately to the right of Nikhil." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Aarav is 6 places clockwise from Lokesh." to determine distances between persons. Use clue: "There are 7 people seated clockwise from Vivaan to Lokesh, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Vikram, Rekha, Tara, Lokesh, Chitra, Vivaan, Deepak, Nikhil, Diya, Aarav. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 45: Circular (facing Centre) — 12 seats

Clues: 1. Varun is at the 12 o'clock position. 2. Isha sits immediately to the right of Siddharth. 3. Siddharth is seated between Rahul and Isha. 4. Manish sits immediately to the right of Geeta. 5. Aditya is 6 places clockwise from Rahul. 6. There are 5 people seated clockwise from Prateek to Ishaan, not counting endpoints. 7. Varun sits opposite Tara.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Rahul?
- Who sits immediately to the left of Geeta?
- Who sits immediately to the right of Ananya?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Varun is at the 12 o'clock position." to place fixed person(s). Use clue: "Varun sits opposite Tara." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Isha sits immediately to the right of Siddharth." to place adjacent relationships. Use clue: "Siddharth is seated between Rahul and Isha." to place adjacent relationships. Use clue: "Manish sits immediately to the right of Geeta." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Aditya is 6 places clockwise from Rahul." to determine distances between persons. Use clue: "There are 5 people seated clockwise from Prateek to Ishaan, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Varun, Aditya, Geeta, Manish, Karan, Ishaan, Tara, Rahul, Siddharth, Isha, Ananya, Prateek. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 46: Square Table (4 sides) — 8 seats

Clues: 1. Suresh sits at the north side of the table. 2. Sonal sits immediately to the right of Nikhil. 3. Ritu is seated between Ishaan and Aarav. 4. Aarav is seated between Ritu and Anika. 5. Ishaan is 3 places clockwise from Nikhil. 6. There are 0 people seated clockwise from Anika to Suresh, not counting endpoints.

Sample Questions (answers in Solutions section):

- How many people are seated clockwise from Ritu to Ishaan, not counting endpoints?
- Who sits immediately to the right of Nikhil?
- Who sits at position 5 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Suresh sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Sonal sits immediately to the right of Nikhil." to place adjacent relationships. Use clue: "Ritu is seated between Ishaan and Aarav." to place adjacent relationships. Use clue: "Aarav is seated between Ritu and Anika." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Ishaan is 3 places clockwise from Nikhil." to determine distances between persons. Use clue: "There are 0 people seated clockwise from Anika to Suresh, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Suresh, Nikhil, Sonal, Manish, Ishaan, Ritu, Aarav, Anika. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 47: Square Table (4 sides) — 8 seats

Clues: 1. Siddharth sits at the north side of the table. 2. Siddharth sits immediately to the left of Rohan. 3. Aditya sits immediately to the right of Karan. 4. Siddharth sits immediately to the right of Ritu. 5. Rohan is 3 places clockwise from Meera. 6. There are 6 people seated clockwise from Meera to Nisha, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Ritu?
- How many people are seated clockwise from Meera to Karan, not counting endpoints?
- Who sits immediately to the left of Nisha?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Siddharth sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Siddharth sits immediately to the left of Rohan." to place adjacent relationships. Use clue: "Aditya sits immediately to the right of Karan." to place adjacent relationships. Use clue: "Siddharth sits immediately to the right of Ritu." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Rohan is 3 places clockwise from Meera." to determine distances between persons. Use clue: "There are 6 people seated clockwise from Meera to Nisha, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Siddharth, Rohan, Karan, Aditya, Yash, Nisha, Meera, Ritu. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 48: Linear (single row, facing South) — 9 seats

Clues: 1. Vikram sits at the leftmost end of the row. 2. Sara sits immediately to the right of Varun. 3. Krishna sits immediately to the left of Suresh. 4. Manish sits immediately to the right of Sara. 5. Suresh is 3 places to the right of Sara. 6. There are 0 people seated clockwise from Varun to Sara, not counting endpoints. 7. Suresh sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits opposite Krishna?
- Who sits immediately to the right of Krishna?
- Who sits immediately to the left of Vikram?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Vikram sits at the leftmost end of the row." to place fixed person(s). Use clue: "Suresh sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Sara sits immediately to the right of Varun." to place adjacent relationships. Use clue: "Krishna sits immediately to the left of Suresh." to place adjacent relationships. Use clue: "Manish sits immediately to the right of Sara." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Suresh is 3 places to the right of Sara." to determine distances between persons. Use clue: "There are 0 people seated clockwise from Varun to Sara, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Varun, Sara, Manish, Krishna, Suresh, Chitra, Nandini, Raj, Vikram. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 49: Linear (single row, facing South) — 10 seats

Clues: 1. Nandini sits at the leftmost end of the row. 2. Neeraj sits immediately to the left of Shreya. 3. Maya is seated between Priya and Sameer. 4. Nandini sits immediately to the left of Priya. 5. Shreya is 4 places to the right of Priya. 6. There are 2 people seated clockwise from Neeraj to Diya, not counting endpoints. 7. Aarav sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Sameer?
- Who sits opposite Priya?
- Who sits immediately to the right of Diya?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Nandini sits at the leftmost end of the row." to place fixed person(s). Use clue: "Aarav sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Neeraj sits immediately to the left of Shreya." to place adjacent relationships. Use clue: "Maya is seated between Priya and Sameer." to place adjacent relationships. Use clue: "Nandini sits immediately to the left of Priya." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Shreya is 4 places to the right of Priya." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Neeraj to Diya, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Priya, Maya, Sameer, Neeraj, Shreya, Aarav, Diya, Yash, Karan, Nandini. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 50: Parallel Rows (two rows facing each other) — 8 seats

Clues: 1. Chitra sits opposite Manish. 2. Krishna is seated between Geeta and Chitra. 3. Chitra is seated between Krishna and Sai. 4. Kavya sits immediately to the right of Manish. 5. Leela is 2 places clockwise from Chitra. 6. There are 6 people seated clockwise from Krishna to Geeta, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits at position 7 (from left, 1-indexed)?
- Who sits immediately to the left of Krishna?
- Who sits at position 2 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Chitra sits opposite Manish." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Krishna is seated between Geeta and Chitra." to place adjacent relationships. Use clue: "Chitra is seated between Krishna and Sai." to place adjacent relationships. Use clue: "Kavya sits immediately to the right of Manish." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Leela is 2 places clockwise from Chitra." to determine distances between persons. Use clue: "There are 6 people seated clockwise from Krishna to Geeta, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Chitra, Sai, Leela, Varun, Manish, Kavya, Geeta, Krishna. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 51: Linear (single row, facing North) — 8 seats

Clues: 1. Shreya sits at the leftmost end of the row. 2. Vijay sits immediately to the right of Asha. 3. Asha sits immediately to the right of Diya. 4. Asha sits immediately to the left of Vijay. 5. Diya is 3 places to the right of Neeraj. 6. There are 4 people seated clockwise from Vijay to Karan, not counting endpoints. 7. Diya sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Vijay?
- Who sits opposite Geeta?
- Who sits at position 7 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Shreya sits at the leftmost end of the row." to place fixed person(s). Use clue: "Diya sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Vijay sits immediately to the right of Asha." to place adjacent relationships. Use clue: "Asha sits immediately to the right of Diya." to place adjacent relationships. Use clue: "Asha sits immediately to the left of Vijay." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Diya is 3 places to the right of Neeraj." to determine distances between persons. Use clue: "There are 4 people seated clockwise from Vijay to Karan, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Shreya, Neeraj, Sai, Karan, Diya, Asha, Vijay, Geeta. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 52: Square Table (4 sides) — 8 seats

Clues: 1. Krishna sits at the north side of the table. 2. Manish sits immediately to the left of Neeraj. 3. Krishna sits immediately to the left of Rahul. 4. Kabir sits immediately to the right of Rahul. 5. Anika is 4 places clockwise from Rahul. 6. There are 2 people seated clockwise from Kabir to Anika, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Anika?
- Who sits immediately to the left of Manish?
- Who sits opposite Manish?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Krishna sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Manish sits immediately to the left of Neeraj." to place adjacent relationships. Use clue: "Krishna sits immediately to the left of Rahul." to place adjacent relationships. Use clue: "Kabir sits immediately to the right of Rahul." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Anika is 4 places clockwise from Rahul." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Kabir to Anika, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Krishna, Rahul, Kabir, Ritu, Deepak, Anika, Manish, Neeraj. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 53: Rectangular Table (opposite facing) — 12 seats

Clues: 1. Arjun sits at the north side of the table. 2. Shreya sits immediately to the right of Tara. 3. Neeraj sits immediately to the right of Priya. 4. Shreya sits immediately to the right of Tara. 5. Shreya is 5 places clockwise from Neeraj. 6. There are 2 people seated clockwise from Rekha to Neeraj, not counting endpoints.

Sample Questions (answers in Solutions section):

- How many people are seated clockwise from Neeraj to Leela, not counting endpoints?
- How many people are seated clockwise from Arjun to Neeraj, not counting endpoints?
- Who sits opposite Arjun?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Arjun sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Shreya sits immediately to the right of Tara." to place adjacent relationships. Use clue: "Neeraj sits immediately to the right of Priya." to place adjacent relationships. Use clue: "Shreya sits immediately to the right of Tara." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Shreya is 5 places clockwise from Neeraj." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Rekha to Neeraj, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Arjun, Tara, Shreya, Nisha, Vikram, Krishna, Rekha, Kavya, Priya, Neeraj, Leela, Maya. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 54: Linear (single row, facing South) — 8 seats

Clues: 1. Neeraj sits at the leftmost end of the row. 2. Aarav sits immediately to the left of Isha. 3. Nisha is seated between Ritu and Sameer. 4. Ritu is seated between Lokesh and Nisha. 5. Lokesh is 5 places to the right of Sameer. 6. There are 4 people seated clockwise from Isha to Sameer, not counting endpoints. 7. Vikram sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits opposite Nisha?
- Who sits opposite Vikram?
- Who sits opposite Ritu?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Neeraj sits at the leftmost end of the row." to place fixed person(s). Use clue: "Vikram sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Aarav sits immediately to the left of Isha." to place adjacent relationships. Use clue: "Nisha is seated between Ritu and Sameer." to place adjacent relationships. Use clue: "Ritu is seated between Lokesh and Nisha." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Lokesh is 5 places to the right of Sameer." to determine distances between persons. Use clue: "There are 4 people seated clockwise from Isha to Sameer, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Lokesh, Ritu, Nisha, Sameer, Vikram, Aarav, Isha, Neeraj. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 55: Linear (single row, facing North) — 7 seats

Clues: 1. Ria sits at the leftmost end of the row. 2. Arjun is seated between Asha and Suresh. 3. Arjun is seated between Asha and Suresh. 4. Suresh sits immediately to the right of Arjun. 5. Ishaan is 4 places to the right of Ritu. 6. There are 2 people seated clockwise from Ria to Arjun, not counting endpoints. 7. Arjun sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits at position 1 (from left, 1-indexed)?
- Who sits opposite Ishaan?
- How many people are seated clockwise from Arjun to Suresh, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Ria sits at the leftmost end of the row." to place fixed person(s). Use clue: "Arjun sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Arjun is seated between Asha and Suresh." to place adjacent relationships. Use clue: "Arjun is seated between Asha and Suresh." to place adjacent relationships. Use clue: "Suresh sits immediately to the right of Arjun." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Ishaan is 4 places to the right of Ritu." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Ria to Arjun, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Ria, Ritu, Asha, Arjun, Suresh, Ishaan, Diya. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 56: Square Table (4 sides) — 8 seats

Clues: 1. Nisha sits at the north side of the table. 2. Nikhil sits immediately to the left of Shreya. 3. Nikhil sits immediately to the right of Maya. 4. Arjun sits immediately to the right of Shreya. 5. Nikhil is 2 places clockwise from Aditya. 6. There are 5 people seated clockwise from Priya to Arjun, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits at position 3 (from left, 1-indexed)?
- Who sits immediately to the right of Aarav?
- How many people are seated clockwise from Nikhil to Shreya, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Nisha sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Nikhil sits immediately to the left of Shreya." to place adjacent relationships. Use clue: "Nikhil sits immediately to the right of Maya." to place adjacent relationships. Use clue: "Arjun sits immediately to the right of Shreya." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Nikhil is 2 places clockwise from Aditya." to determine distances between persons. Use clue: "There are 5 people seated clockwise from Priya to Arjun, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Nisha, Aditya, Maya, Nikhil, Shreya, Arjun, Aarav, Priya. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 57: Parallel Rows (two rows facing each other) — 12 seats

Clues: 1. Vikram sits opposite Amit. 2. Amit is seated between Vivaan and Ritu. 3. Aditya sits immediately to the left of Kabir. 4. Vivaan sits immediately to the left of Amit. 5. Rekha is 4 places clockwise from Vivaan. 6. There are 9 people seated clockwise from Rekha to Ritu, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits opposite Sai?
- Who sits at position 2 (from left, 1-indexed)?
- Who sits immediately to the right of Amit?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Vikram sits opposite Amit." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Amit is seated between Vivaan and Ritu." to place adjacent relationships. Use clue: "Aditya sits immediately to the left of Kabir." to place adjacent relationships. Use clue: "Vivaan sits immediately to the left of Amit." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Rekha is 4 places clockwise from Vivaan." to determine distances between persons. Use clue: "There are 9 people seated clockwise from Rekha to Ritu, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Vikram, Sai, Nikhil, Aditya, Kabir, Vivaan, Amit, Ritu, Rahul, Rekha, Prateek, Vijay. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 58: Parallel Rows (two rows facing each other) — 10 seats

Clues: 1. Pooja sits opposite Maya. 2. Ishaan is seated between Pooja and Nikhil. 3. Sameer sits immediately to the right of Nisha. 4. Maya is seated between Sameer and Prateek. 5. Maya is 3 places clockwise from Nikhil. 6. There are 1 people seated clockwise from Ishaan to Nisha, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits opposite Nisha?
- Who sits immediately to the right of Kavya?
- Who sits immediately to the right of Ishaan?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Pooja sits opposite Maya." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Ishaan is seated between Pooja and Nikhil." to place adjacent relationships. Use clue: "Sameer sits immediately to the right of Nisha." to place adjacent relationships. Use clue: "Maya is seated between Sameer and Prateek." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Maya is 3 places clockwise from Nikhil." to determine distances between persons. Use clue: "There are 1 people seated clockwise from Ishaan to Nisha, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Pooja, Ishaan, Nikhil, Nisha, Sameer, Maya, Prateek, Ria, Sai, Kavya. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 59: Linear (single row, facing South) — 9 seats

Clues: 1. Vijay sits at the leftmost end of the row. 2. Suresh is seated between Varun and Chitra. 3. Geeta sits immediately to the right of Rekha. 4. Rekha sits immediately to the right of Ritu. 5. Rekha is 4 places to the right of Raj. 6. There are 4 people seated clockwise from Varun to Amit, not counting endpoints. 7. Varun sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits opposite Vijay?
- Who sits immediately to the left of Varun?
- Who sits at position 8 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Vijay sits at the leftmost end of the row." to place fixed person(s). Use clue: "Varun sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Suresh is seated between Varun and Chitra." to place adjacent relationships. Use clue: "Geeta sits immediately to the right of Rekha." to place adjacent relationships. Use clue: "Rekha sits immediately to the right of Ritu." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Rekha is 4 places to the right of Raj." to determine distances between persons. Use clue: "There are 4 people seated clockwise from Varun to Amit, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Amit, Ritu, Rekha, Geeta, Varun, Suresh, Chitra, Raj, Vijay. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 60: Linear (single row, facing North) — 6 seats

Clues: 1. Manish sits at the leftmost end of the row. 2. Ishaan is seated between Raj and Asha. 3. Raj is seated between Sai and Ishaan. 4. Ishaan sits immediately to the left of Asha. 5. Asha is 2 places to the right of Raj. 6. Raj sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits opposite Ishaan?
- Who sits at position 5 (from left, 1-indexed)?
- Who sits immediately to the right of Manish?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Manish sits at the leftmost end of the row." to place fixed person(s). Use clue: "Raj sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Ishaan is seated between Raj and Asha." to place adjacent relationships. Use clue: "Raj is seated between Sai and Ishaan." to place adjacent relationships. Use clue: "Ishaan sits immediately to the left of Asha." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Asha is 2 places to the right of Raj." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Manish, Tara, Sai, Raj, Ishaan, Asha. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 61: Circular (facing Outside) — 6 seats

Clues: 1. Sameer is at the 12 o'clock position. 2. Isha sits immediately to the left of Sameer. 3. Sameer sits immediately to the right of Isha. 4. Kavya is seated between Ishaan and Raj. 5. Sameer is 2 places clockwise from Raj. 6. Sameer sits opposite Kavya.

Sample Questions (answers in Solutions section):

- Who sits opposite Ishaan?
- Who sits opposite Kavya?
- Who sits at position 3 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Sameer is at the 12 o'clock position." to place fixed person(s). Use clue: "Sameer sits opposite Kavya." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Isha sits immediately to the left of Sameer." to place adjacent relationships. Use clue: "Sameer sits immediately to the right of Isha." to place adjacent relationships. Use clue: "Kavya is seated between Ishaan and Raj." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Sameer is 2 places clockwise from Raj." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Sameer, Prateek, Ishaan, Kavya, Raj, Isha. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 62: Square Table (4 sides) — 8 seats

Clues: 1. Shreya sits at the north side of the table. 2. Krishna sits immediately to the right of Prateek. 3. Sameer is seated between Raj and Sai. 4. Raj sits immediately to the right of Vijay. 5. Sameer is 3 places clockwise from Arjun. 6. There are 4 people seated clockwise from Sai to Vijay, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits at position 3 (from left, 1-indexed)?
- How many people are seated clockwise from Arjun to Vijay, not counting endpoints?
- How many people are seated clockwise from Prateek to Sai, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Shreya sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Krishna sits immediately to the right of Prateek." to place adjacent relationships. Use clue: "Sameer is seated between Raj and Sai." to place adjacent relationships. Use clue: "Raj sits immediately to the right of Vijay." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Sameer is 3 places clockwise from Arjun." to determine distances between persons. Use clue: "There are 4 people seated clockwise from Sai to Vijay, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Shreya, Arjun, Vijay, Raj, Sameer, Sai, Prateek, Krishna. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 63: Rectangular Table (opposite facing) — 10 seats

Clues: 1. Karan sits at the north side of the table. 2. Pooja sits immediately to the left of Ishaan. 3. Raj sits immediately to the right of Ishaan. 4. Deepak sits immediately to the left of Lokesh. 5. Karan is 5 places clockwise from Ishaan. 6. There are 0 people seated clockwise from Suresh to Pooja, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Lokesh?
- Who sits immediately to the left of Pooja?
- Who sits immediately to the left of Kabir?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Karan sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Pooja sits immediately to the left of Ishaan." to place adjacent relationships. Use clue: "Raj sits immediately to the right of Ishaan." to place adjacent relationships. Use clue: "Deepak sits immediately to the left of Lokesh." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Karan is 5 places clockwise from Ishaan." to determine distances between persons. Use clue: "There are 0 people seated clockwise from Suresh to Pooja, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Karan, Deepak, Lokesh, Suresh, Pooja, Ishaan, Raj, Ritu, Kabir, Kavya. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 64: Rectangular Table (opposite facing) — 12 seats

Clues: 1. Chitra sits at the north side of the table. 2. Isha is seated between Ria and Chitra. 3. Chitra sits immediately to the right of Isha. 4. Pooja sits immediately to the right of Chitra. 5. Ria is 5 places clockwise from Asha. 6. There are 2 people seated clockwise from Shreya to Ria, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits opposite Isha?
- Who sits at position 4 (from left, 1-indexed)?
- How many people are seated clockwise from Deepak to Sameer, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Chitra sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Isha is seated between Ria and Chitra." to place adjacent relationships. Use clue: "Chitra sits immediately to the right of Isha." to place adjacent relationships. Use clue: "Pooja sits immediately to the right of Chitra." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Ria is 5 places clockwise from Asha." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Shreya to Ria, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Chitra, Pooja, Aditya, Deepak, Sameer, Asha, Karan, Shreya, Harsh, Neeraj, Ria, Isha. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 65: Rectangular Table (opposite facing) — 10 seats

Clues: 1. Ananya sits at the north side of the table. 2. Amit sits immediately to the left of Tara. 3. Rekha is seated between Suresh and Varun. 4. Rekha sits immediately to the left of Varun. 5. Manish is 4 places clockwise from Harsh. 6. There are 2 people seated clockwise from Kavya to Manish, not counting endpoints.

Sample Questions (answers in Solutions section):

- How many people are seated clockwise from Manish to Varun, not counting endpoints?
- Who sits immediately to the left of Suresh?
- Who sits opposite Harsh?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Ananya sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Amit sits immediately to the left of Tara." to place adjacent relationships. Use clue: "Rekha is seated between Suresh and Varun." to place adjacent relationships. Use clue: "Rekha sits immediately to the left of Varun." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Manish is 4 places clockwise from Harsh." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Kavya to Manish, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Ananya, Manish, Suresh, Rekha, Varun, Amit, Tara, Harsh, Kavya, Pooja. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 66: Parallel Rows (two rows facing each other) — 8 seats

Clues: 1. Kabir sits opposite Vikram. 2. Siddharth is seated between Vivaan and Arjun. 3. Vikram sits immediately to the right of Varun. 4. Maya sits immediately to the right of Ishaan. 5. Vivaan is 2 places clockwise from Varun. 6. There are 2 people seated clockwise from Vivaan to Kabir, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits opposite Maya?
- Who sits immediately to the right of Kabir?
- Who sits opposite Arjun?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Kabir sits opposite Vikram." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Siddharth is seated between Vivaan and Arjun." to place adjacent relationships. Use clue: "Vikram sits immediately to the right of Varun." to place adjacent relationships. Use clue: "Maya sits immediately to the right of Ishaan." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Vivaan is 2 places clockwise from Varun." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Vivaan to Kabir, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Kabir, Ishaan, Maya, Varun, Vikram, Vivaan, Siddharth, Arjun. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 67: Square Table (4 sides) — 8 seats

Clues: 1. Karan sits at the north side of the table. 2. Ritu sits immediately to the right of Karan. 3. Prateek sits immediately to the left of Leela. 4. Asha sits immediately to the left of Aarav. 5. Ishaan is 3 places clockwise from Varun. 6. There are 3 people seated clockwise from Varun to Karan, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Leela?
- Who sits at position 8 (from left, 1-indexed)?
- Who sits immediately to the left of Ritu?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Karan sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Ritu sits immediately to the right of Karan." to place adjacent relationships. Use clue: "Prateek sits immediately to the left of Leela." to place adjacent relationships. Use clue: "Asha sits immediately to the left of Aarav." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Ishaan is 3 places clockwise from Varun." to determine distances between persons. Use clue: "There are 3 people seated clockwise from Varun to Karan, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Karan, Ritu, Prateek, Leela, Varun, Asha, Aarav, Ishaan. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 68: Rectangular Table (opposite facing) — 10 seats

Clues: 1. Shreya sits at the north side of the table. 2. Shreya is seated between Kabir and Nandini. 3. Vijay is seated between Vivaan and Kavya. 4. Vivaan is seated between Nandini and Vijay. 5. Neeraj is 6 places clockwise from Nandini. 6. There are 5 people seated clockwise from Rekha to Nandini, not counting endpoints.

Sample Questions (answers in Solutions section):

- How many people are seated clockwise from Tara to Kabir, not counting endpoints?
- How many people are seated clockwise from Tara to Shreya, not counting endpoints?
- Who sits at position 8 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Shreya sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Shreya is seated between Kabir and Nandini." to place adjacent relationships. Use clue: "Vijay is seated between Vivaan and Kavya." to place adjacent relationships. Use clue: "Vivaan is seated between Nandini and Vijay." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Neeraj is 6 places clockwise from Nandini." to determine distances between persons. Use clue: "There are 5 people seated clockwise from Rekha to Nandini, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Shreya, Nandini, Vivaan, Vijay, Kavya, Rekha, Sara, Neeraj, Tara, Kabir. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 69: Linear (single row, facing North) — 9 seats

Clues: 1. Manish sits at the leftmost end of the row. 2. Anika is seated between Manish and Chitra. 3. Vikram sits immediately to the left of Sai. 4. Anika sits immediately to the right of Manish. 5. Vivaan is 4 places to the right of Vijay. 6. There are 5 people seated clockwise from Chitra to Vijay, not counting endpoints. 7. Vikram sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits at position 3 (from left, 1-indexed)?
- Who sits immediately to the right of Anika?
- Who sits at position 1 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Manish sits at the leftmost end of the row." to place fixed person(s). Use clue: "Vikram sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Anika is seated between Manish and Chitra." to place adjacent relationships. Use clue: "Vikram sits immediately to the left of Sai." to place adjacent relationships. Use clue: "Anika sits immediately to the right of Manish." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Vivaan is 4 places to the right of Vijay." to determine distances between persons. Use clue: "There are 5 people seated clockwise from Chitra to Vijay, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Manish, Anika, Chitra, Vivaan, Vikram, Sai, Prateek, Sara, Vijay. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 70: Circular (facing Centre) — 8 seats

Clues: 1. Ananya is at the 12 o'clock position. 2. Nisha sits immediately to the left of Kavya. 3. Kavya sits immediately to the right of Nisha. 4. Kavya sits immediately to the left of Nikhil. 5. Aditya is 4 places clockwise from Nikhil. 6. There are 5 people seated clockwise from Aditya to Leela, not counting endpoints. 7. Ananya sits opposite Kavya.

Sample Questions (answers in Solutions section):

- Who sits opposite Nandini?
- Who sits at position 8 (from left, 1-indexed)?
- Who sits at position 6 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Ananya is at the 12 o'clock position." to place fixed person(s). Use clue: "Ananya sits opposite Kavya." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Nisha sits immediately to the left of Kavya." to place adjacent relationships. Use clue: "Kavya sits immediately to the right of Nisha." to place adjacent relationships. Use clue: "Kavya sits immediately to the left of Nikhil." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Aditya is 4 places clockwise from Nikhil." to determine distances between persons. Use clue: "There are 5 people seated clockwise from Aditya to Leela, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Ananya, Aditya, Rahul, Nisha, Kavya, Nikhil, Nandini, Leela. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 71: Linear (single row, facing South) — 9 seats

Clues: 1. Suresh sits at the leftmost end of the row. 2. Manish is seated between Meera and Pooja. 3. Diya sits immediately to the left of Ishaan. 4. Manish sits immediately to the right of Meera. 5. Suresh is 4 places to the right of Diya. 6. There are 7 people seated clockwise from Kriti to Kabir, not counting endpoints. 7. Diya sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Kriti?
- Who sits opposite Kriti?
- Who sits immediately to the left of Ishaan?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Suresh sits at the leftmost end of the row." to place fixed person(s). Use clue: "Diya sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Manish is seated between Meera and Pooja." to place adjacent relationships. Use clue: "Diya sits immediately to the left of Ishaan." to place adjacent relationships. Use clue: "Manish sits immediately to the right of Meera." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Suresh is 4 places to the right of Diya." to determine distances between persons. Use clue: "There are 7 people seated clockwise from Kriti to Kabir, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Lokesh, Meera, Manish, Pooja, Diya, Ishaan, Kabir, Kriti, Suresh. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 72: Parallel Rows (two rows facing each other) — 10 seats

Clues: 1. Diya sits opposite Ritu. 2. Ria sits immediately to the left of Diya. 3. Ria is seated between Kavya and Diya. 4. Nikhil sits immediately to the left of Manish. 5. Deepak is 2 places clockwise from Arjun. 6. There are 2 people seated clockwise from Sai to Nikhil, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits opposite Nikhil?
- How many people are seated clockwise from Diya to Arjun, not counting endpoints?
- Who sits at position 6 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Diya sits opposite Ritu." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Ria sits immediately to the left of Diya." to place adjacent relationships. Use clue: "Ria is seated between Kavya and Diya." to place adjacent relationships. Use clue: "Nikhil sits immediately to the left of Manish." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Deepak is 2 places clockwise from Arjun." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Sai to Nikhil, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Diya, Vijay, Arjun, Sai, Deepak, Ritu, Nikhil, Manish, Kavya, Ria. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 73: Circular (facing Centre) — 9 seats

Clues: 1. Rekha is at the 12 o'clock position. 2. Rekha sits immediately to the left of Karan. 3. Manish sits immediately to the right of Pooja. 4. Rekha sits immediately to the right of Sara. 5. Karan is 2 places clockwise from Sara. 6. There are 0 people seated clockwise from Nikhil to Rahul, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits at position 4 (from left, 1-indexed)?
- How many people are seated clockwise from Nikhil to Diya, not counting endpoints?
- Who sits immediately to the right of Karan?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Rekha is at the 12 o'clock position." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Rekha sits immediately to the left of Karan." to place adjacent relationships. Use clue: "Manish sits immediately to the right of Pooja." to place adjacent relationships. Use clue: "Rekha sits immediately to the right of Sara." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Karan is 2 places clockwise from Sara." to determine distances between persons. Use clue: "There are 0 people seated clockwise from Nikhil to Rahul, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Rekha, Karan, Pooja, Manish, Nikhil, Rahul, Raj, Diya, Sara. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 74: Linear (single row, facing South) — 6 seats

Clues: 1. Suresh sits at the leftmost end of the row. 2. Prateek is seated between Isha and Kriti. 3. Ishaan sits immediately to the left of Suresh. 4. Ishaan is seated between Kriti and Suresh. 5. Ishaan is 2 places to the right of Prateek. 6. Kriti sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Prateek?
- How many people are seated clockwise from Isha to Varun, not counting endpoints?
- Who sits immediately to the right of Isha?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Suresh sits at the leftmost end of the row." to place fixed person(s). Use clue: "Kriti sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Prateek is seated between Isha and Kriti." to place adjacent relationships. Use clue: "Ishaan sits immediately to the left of Suresh." to place adjacent relationships. Use clue: "Ishaan is seated between Kriti and Suresh." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Ishaan is 2 places to the right of Prateek." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Varun, Isha, Prateek, Kriti, Ishaan, Suresh. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 75: Linear (single row, facing South) — 9 seats

Clues: 1. Asha sits at the leftmost end of the row. 2. Vivaan sits immediately to the left of Manish. 3. Amit sits immediately to the right of Ritu. 4. Karan is seated between Chitra and Asha. 5. Rekha is 6 places to the right of Chitra. 6. There are 1 people seated clockwise from Manish to Rekha, not counting endpoints. 7. Ritu sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits opposite Manish?
- Who sits at position 8 (from left, 1-indexed)?
- How many people are seated clockwise from Amit to Sonal, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Asha sits at the leftmost end of the row." to place fixed person(s). Use clue: "Ritu sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Vivaan sits immediately to the left of Manish." to place adjacent relationships. Use clue: "Amit sits immediately to the right of Ritu." to place adjacent relationships. Use clue: "Karan is seated between Chitra and Asha." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Rekha is 6 places to the right of Chitra." to determine distances between persons. Use clue: "There are 1 people seated clockwise from Manish to Rekha, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Vivaan, Manish, Sonal, Rekha, Ritu, Amit, Chitra, Karan, Asha. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 76: Rectangular Table (opposite facing) — 12 seats

Clues: 1. Vijay sits at the north side of the table. 2. Karan sits immediately to the right of Isha. 3. Nisha sits immediately to the left of Ria. 4. Kavya is seated between Kabir and Arjun. 5. Rohan is 6 places clockwise from Geeta. 6. There are 7 people seated clockwise from Karan to Ria, not counting endpoints.

Sample Questions (answers in Solutions section):

- How many people are seated clockwise from Kabir to Isha, not counting endpoints?
- Who sits opposite Neeraj?
- How many people are seated clockwise from Geeta to Pooja, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Vijay sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Karan sits immediately to the right of Isha." to place adjacent relationships. Use clue: "Nisha sits immediately to the left of Ria." to place adjacent relationships. Use clue: "Kavya is seated between Kabir and Arjun." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Rohan is 6 places clockwise from Geeta." to determine distances between persons. Use clue: "There are 7 people seated clockwise from Karan to Ria, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Vijay, Geeta, Isha, Karan, Kabir, Kavya, Arjun, Rohan, Pooja, Neeraj, Nisha, Ria. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 77: Square Table (4 sides) — 8 seats

Clues: 1. Ria sits at the north side of the table. 2. Deepak is seated between Kriti and Asha. 3. Shreya sits immediately to the left of Ria. 4. Ria is seated between Shreya and Geeta. 5. Shreya is 3 places clockwise from Kriti. 6. There are 5 people seated clockwise from Asha to Kriti, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Shreya?
- How many people are seated clockwise from Kriti to Deepak, not counting endpoints?
- Who sits opposite Shreya?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Ria sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Deepak is seated between Kriti and Asha." to place adjacent relationships. Use clue: "Shreya sits immediately to the left of Ria." to place adjacent relationships. Use clue: "Ria is seated between Shreya and Geeta." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Shreya is 3 places clockwise from Kriti." to determine distances between persons. Use clue: "There are 5 people seated clockwise from Asha to Kriti, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Ria, Geeta, Ritu, Neeraj, Kriti, Deepak, Asha, Shreya. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 78: Linear (single row, facing South) — 9 seats

Clues: 1. Leela sits at the leftmost end of the row. 2. Varun sits immediately to the left of Siddharth. 3. Ria is seated between Arjun and Varun. 4. Ria is seated between Arjun and Varun. 5. Amit is 5 places to the right of Ria. 6. There are 3 people seated clockwise from Sai to Varun, not counting endpoints. 7. Arjun sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- How many people are seated clockwise from Leela to Amit, not counting endpoints?
- Who sits opposite Lokesh?
- Who sits at position 2 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Leela sits at the leftmost end of the row." to place fixed person(s). Use clue: "Arjun sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Varun sits immediately to the left of Siddharth." to place adjacent relationships. Use clue: "Ria is seated between Arjun and Varun." to place adjacent relationships. Use clue: "Ria is seated between Arjun and Varun." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Amit is 5 places to the right of Ria." to determine distances between persons. Use clue: "There are 3 people seated clockwise from Sai to Varun, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Nisha, Amit, Sai, Lokesh, Arjun, Ria, Varun, Siddharth, Leela. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 79: Circular (facing Centre) — 10 seats

Clues: 1. Krishna is at the 12 o'clock position. 2. Asha sits immediately to the left of Siddharth. 3. Harsh sits immediately to the right of Tara. 4. Rekha sits immediately to the right of Rahul. 5. Arjun is 4 places clockwise from Ria. 6. There are 2 people seated clockwise from Ria to Krishna, not counting endpoints. 7. Krishna sits opposite Siddharth.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Sara?
- How many people are seated clockwise from Ria to Harsh, not counting endpoints?
- Who sits immediately to the right of Rekha?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Krishna is at the 12 o'clock position." to place fixed person(s). Use clue: "Krishna sits opposite Siddharth." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Asha sits immediately to the left of Siddharth." to place adjacent relationships. Use clue: "Harsh sits immediately to the right of Tara." to place adjacent relationships. Use clue: "Rekha sits immediately to the right of Rahul." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Arjun is 4 places clockwise from Ria." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Ria to Krishna, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Krishna, Arjun, Tara, Harsh, Asha, Siddharth, Sara, Ria, Rahul, Rekha. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 80: Circular (facing Centre) — 6 seats

Clues: 1. Arjun is at the 12 o'clock position. 2. Raj sits immediately to the right of Shreya. 3. Shreya sits immediately to the left of Raj. 4. Tara sits immediately to the right of Arjun. 5. Raj is 3 places clockwise from Tara. 6. Arjun sits opposite Shreya.

Sample Questions (answers in Solutions section):

- Who sits opposite Shreya?
- Who sits opposite Arjun?
- Who sits at position 1 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Arjun is at the 12 o'clock position." to place fixed person(s). Use clue: "Arjun sits opposite Shreya." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Raj sits immediately to the right of Shreya." to place adjacent relationships. Use clue: "Shreya sits immediately to the left of Raj." to place adjacent relationships. Use clue: "Tara sits immediately to the right of Arjun." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Raj is 3 places clockwise from Tara." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Arjun, Tara, Meera, Shreya, Raj, Suresh. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 81: Parallel Rows (two rows facing each other) — 12 seats

Clues: 1. Ananya sits opposite Kavya. 2. Manish sits immediately to the left of Sonal. 3. Varun sits immediately to the right of Kavya. 4. Harsh is seated between Sai and Kavya. 5. Varun is 5 places clockwise from Sonal. 6. There are 10 people seated clockwise from Diya to Chitra, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits at position 9 (from left, 1-indexed)?
- Who sits immediately to the left of Ananya?
- Who sits immediately to the left of Sonal?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Ananya sits opposite Kavya." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Manish sits immediately to the left of Sonal." to place adjacent relationships. Use clue: "Varun sits immediately to the right of Kavya." to place adjacent relationships. Use clue: "Harsh is seated between Sai and Kavya." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Varun is 5 places clockwise from Sonal." to determine distances between persons. Use clue: "There are 10 people seated clockwise from Diya to Chitra, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Ananya, Manish, Sonal, Tara, Sai, Harsh, Kavya, Varun, Chitra, Diya, Asha, Rohan. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 82: Square Table (4 sides) — 8 seats

Clues: 1. Sameer sits at the north side of the table. 2. Shreya is seated between Neeraj and Kavya. 3. Amit sits immediately to the right of Pooja. 4. Neeraj is seated between Amit and Shreya. 5. Amit is 4 places clockwise from Karan. 6. There are 6 people seated clockwise from Karan to Kavya, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Shreya?
- Who sits opposite Leela?
- Who sits at position 5 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Sameer sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Shreya is seated between Neeraj and Kavya." to place adjacent relationships. Use clue: "Amit sits immediately to the right of Pooja." to place adjacent relationships. Use clue: "Neeraj is seated between Amit and Shreya." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Amit is 4 places clockwise from Karan." to determine distances between persons. Use clue: "There are 6 people seated clockwise from Karan to Kavya, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Sameer, Leela, Pooja, Amit, Neeraj, Shreya, Kavya, Karan. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 83: Rectangular Table (opposite facing) — 12 seats

Clues: 1. Lokesh sits at the north side of the table. 2. Raj sits immediately to the left of Geeta. 3. Rekha is seated between Geeta and Maya. 4. Vivaan is seated between Vijay and Shreya. 5. Shreya is 3 places clockwise from Lokesh. 6. There are 8 people seated clockwise from Shreya to Lokesh, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits at position 6 (from left, 1-indexed)?
- Who sits at position 3 (from left, 1-indexed)?
- Who sits at position 12 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Lokesh sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Raj sits immediately to the left of Geeta." to place adjacent relationships. Use clue: "Rekha is seated between Geeta and Maya." to place adjacent relationships. Use clue: "Vivaan is seated between Vijay and Shreya." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Shreya is 3 places clockwise from Lokesh." to determine distances between persons. Use clue: "There are 8 people seated clockwise from Shreya to Lokesh, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Lokesh, Vijay, Vivaan, Shreya, Leela, Anika, Raj, Geeta, Rekha, Maya, Arjun, Deepak. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 84: Linear (single row, facing South) — 9 seats

Clues: 1. Sonal sits at the leftmost end of the row. 2. Karan is seated between Arjun and Pooja. 3. Kavya sits immediately to the right of Sonal. 4. Arjun sits immediately to the left of Karan. 5. Arjun is 6 places to the right of Priya. 6. There are 0 people seated clockwise from Karan to Pooja, not counting endpoints. 7. Arjun sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits opposite Priya?
- Who sits immediately to the right of Yash?
- Who sits opposite Sonal?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Sonal sits at the leftmost end of the row." to place fixed person(s). Use clue: "Arjun sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Karan is seated between Arjun and Pooja." to place adjacent relationships. Use clue: "Kavya sits immediately to the right of Sonal." to place adjacent relationships. Use clue: "Arjun sits immediately to the left of Karan." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Arjun is 6 places to the right of Priya." to determine distances between persons. Use clue: "There are 0 people seated clockwise from Karan to Pooja, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Kavya, Asha, Leela, Yash, Arjun, Karan, Pooja, Priya, Sonal. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 85: Circular (facing Centre) — 7 seats

Clues: 1. Nisha is at the 12 o'clock position. 2. Lokesh sits immediately to the right of Priya. 3. Lokesh is seated between Priya and Meera. 4. Tara sits immediately to the left of Prateek. 5. Tara is 4 places clockwise from Lokesh. 6. There are 5 people seated clockwise from Lokesh to Priya, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits at position 7 (from left, 1-indexed)?
- Who sits opposite Rahul?
- Who sits immediately to the right of Prateek?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Nisha is at the 12 o'clock position." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Lokesh sits immediately to the right of Priya." to place adjacent relationships. Use clue: "Lokesh is seated between Priya and Meera." to place adjacent relationships. Use clue: "Tara sits immediately to the left of Prateek." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Tara is 4 places clockwise from Lokesh." to determine distances between persons. Use clue: "There are 5 people seated clockwise from Lokesh to Priya, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Nisha, Tara, Prateek, Priya, Lokesh, Meera, Rahul. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 86: Linear (single row, facing North) — 8 seats

Clues: 1. Prateek sits at the leftmost end of the row. 2. Varun is seated between Vikram and Raj. 3. Varun sits immediately to the left of Raj. 4. Ishaan is seated between Prateek and Vikram. 5. Leela is 3 places to the right of Varun. 6. There are 5 people seated clockwise from Prateek to Leela, not counting endpoints. 7. Raj sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- How many people are seated clockwise from Varun to Anika, not counting endpoints?
- Who sits immediately to the right of Prateek?
- Who sits immediately to the left of Leela?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Prateek sits at the leftmost end of the row." to place fixed person(s). Use clue: "Raj sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Varun is seated between Vikram and Raj." to place adjacent relationships. Use clue: "Varun sits immediately to the left of Raj." to place adjacent relationships. Use clue: "Ishaan is seated between Prateek and Vikram." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Leela is 3 places to the right of Varun." to determine distances between persons. Use clue: "There are 5 people seated clockwise from Prateek to Leela, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Prateek, Ishaan, Vikram, Varun, Raj, Anika, Leela, Priya. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 87: Circular (facing Centre) — 11 seats

Clues: 1. Suresh is at the 12 o'clock position. 2. Raj sits immediately to the right of Siddharth. 3. Ananya sits immediately to the left of Tara. 4. Karan is seated between Suresh and Aarav. 5. Ria is 7 places clockwise from Deepak. 6. There are 2 people seated clockwise from Suresh to Sonal, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits at position 3 (from left, 1-indexed)?
- Who sits immediately to the left of Raj?
- Who sits at position 3 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Suresh is at the 12 o'clock position." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Raj sits immediately to the right of Siddharth." to place adjacent relationships. Use clue: "Ananya sits immediately to the left of Tara." to place adjacent relationships. Use clue: "Karan is seated between Suresh and Aarav." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Ria is 7 places clockwise from Deepak." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Suresh to Sonal, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Suresh, Karan, Aarav, Sonal, Ria, Siddharth, Raj, Leela, Deepak, Ananya, Tara. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 88: Square Table (4 sides) — 8 seats

Clues: 1. Tara sits at the north side of the table. 2. Shreya sits immediately to the right of Rekha. 3. Krishna sits immediately to the left of Sameer. 4. Tara sits immediately to the right of Sameer. 5. Shreya is 2 places clockwise from Nisha. 6. There are 3 people seated clockwise from Shreya to Aditya, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits at position 5 (from left, 1-indexed)?
- Who sits immediately to the right of Tara?
- Who sits opposite Rekha?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Tara sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Shreya sits immediately to the right of Rekha." to place adjacent relationships. Use clue: "Krishna sits immediately to the left of Sameer." to place adjacent relationships. Use clue: "Tara sits immediately to the right of Sameer." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Shreya is 2 places clockwise from Nisha." to determine distances between persons. Use clue: "There are 3 people seated clockwise from Shreya to Aditya, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Tara, Aditya, Aarav, Nisha, Rekha, Shreya, Krishna, Sameer. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 89: Parallel Rows (two rows facing each other) — 12 seats

Clues: 1. Ritu sits opposite Kabir. 2. Ananya sits immediately to the left of Isha. 3. Rahul sits immediately to the right of Kavya. 4. Isha sits immediately to the left of Asha. 5. Ritu is 8 places clockwise from Vijay. 6. There are 4 people seated clockwise from Asha to Rahul, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits opposite Nikhil?
- Who sits opposite Ishaan?
- How many people are seated clockwise from Ritu to Vijay, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Ritu sits opposite Kabir." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Ananya sits immediately to the left of Isha." to place adjacent relationships. Use clue: "Rahul sits immediately to the right of Kavya." to place adjacent relationships. Use clue: "Isha sits immediately to the left of Asha." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Ritu is 8 places clockwise from Vijay." to determine distances between persons. Use clue: "There are 4 people seated clockwise from Asha to Rahul, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Ritu, Ananya, Isha, Asha, Vijay, Nikhil, Kabir, Kavya, Rahul, Ishaan, Lokesh, Krishna. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 90: Square Table (4 sides) — 8 seats

Clues: 1. Manish sits at the north side of the table. 2. Arjun sits immediately to the right of Sara. 3. Deepak is seated between Arjun and Rohan. 4. Rohan sits immediately to the right of Deepak. 5. Amit is 3 places clockwise from Arjun. 6. There are 1 people seated clockwise from Sara to Deepak, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Nisha?
- How many people are seated clockwise from Rohan to Arjun, not counting endpoints?
- How many people are seated clockwise from Nisha to Amit, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Manish sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Arjun sits immediately to the right of Sara." to place adjacent relationships. Use clue: "Deepak is seated between Arjun and Rohan." to place adjacent relationships. Use clue: "Rohan sits immediately to the right of Deepak." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Amit is 3 places clockwise from Arjun." to determine distances between persons. Use clue: "There are 1 people seated clockwise from Sara to Deepak, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Manish, Lokesh, Sara, Arjun, Deepak, Rohan, Amit, Nisha. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 91: Parallel Rows (two rows facing each other) — 12 seats

Clues: 1. Priya sits opposite Pooja. 2. Priya sits immediately to the left of Ritu. 3. Yash is seated between Varun and Manish. 4. Manish is seated between Yash and Sai. 5. Manish is 7 places clockwise from Sara. 6. There are 10 people seated clockwise from Yash to Varun, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Sai?
- Who sits immediately to the right of Rekha?
- How many people are seated clockwise from Varun to Ritu, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Priya sits opposite Pooja." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Priya sits immediately to the left of Ritu." to place adjacent relationships. Use clue: "Yash is seated between Varun and Manish." to place adjacent relationships. Use clue: "Manish is seated between Yash and Sai." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Manish is 7 places clockwise from Sara." to determine distances between persons. Use clue: "There are 10 people seated clockwise from Yash to Varun, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Priya, Ritu, Sara, Suresh, Shreya, Ishaan, Pooja, Varun, Yash, Manish, Sai, Rekha. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 92: Parallel Rows (two rows facing each other) — 10 seats

Clues: 1. Arjun sits opposite Ritu. 2. Siddharth is seated between Kavya and Ritu. 3. Kriti sits immediately to the right of Rekha. 4. Arjun is seated between Lokesh and Amit. 5. Amit is 2 places clockwise from Lokesh. 6. There are 6 people seated clockwise from Arjun to Kriti, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits opposite Amit?
- How many people are seated clockwise from Arjun to Amit, not counting endpoints?
- Who sits at position 1 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Arjun sits opposite Ritu." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Siddharth is seated between Kavya and Ritu." to place adjacent relationships. Use clue: "Kriti sits immediately to the right of Rekha." to place adjacent relationships. Use clue: "Arjun is seated between Lokesh and Amit." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Amit is 2 places clockwise from Lokesh." to determine distances between persons. Use clue: "There are 6 people seated clockwise from Arjun to Kriti, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Arjun, Amit, Karan, Kavya, Siddharth, Ritu, Rekha, Kriti, Sonal, Lokesh. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 93: Circular (facing Centre) — 10 seats

Clues: 1. Karan is at the 12 o'clock position. 2. Raj is seated between Karan and Yash. 3. Varun sits immediately to the left of Suresh. 4. Siddharth sits immediately to the left of Manish. 5. Suresh is 6 places clockwise from Yash. 6. There are 2 people seated clockwise from Harsh to Chitra, not counting endpoints. 7. Karan sits opposite Manish.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Ritu?
- Who sits immediately to the left of Karan?
- Who sits opposite Varun?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Karan is at the 12 o'clock position." to place fixed person(s). Use clue: "Karan sits opposite Manish." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Raj is seated between Karan and Yash." to place adjacent relationships. Use clue: "Varun sits immediately to the left of Suresh." to place adjacent relationships. Use clue: "Siddharth sits immediately to the left of Manish." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Suresh is 6 places clockwise from Yash." to determine distances between persons. Use clue: "There are 2 people seated clockwise from Harsh to Chitra, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Karan, Raj, Yash, Ritu, Siddharth, Manish, Harsh, Varun, Suresh, Chitra. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 94: Square Table (4 sides) — 8 seats

Clues: 1. Yash sits at the north side of the table. 2. Harsh sits immediately to the left of Maya. 3. Ritu sits immediately to the left of Harsh. 4. Yash sits immediately to the left of Nandini. 5. Yash is 2 places clockwise from Sara. 6. There are 5 people seated clockwise from Ritu to Nandini, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Nandini?
- How many people are seated clockwise from Yash to Ritu, not counting endpoints?
- How many people are seated clockwise from Yash to Nandini, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Yash sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Harsh sits immediately to the left of Maya." to place adjacent relationships. Use clue: "Ritu sits immediately to the left of Harsh." to place adjacent relationships. Use clue: "Yash sits immediately to the left of Nandini." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Yash is 2 places clockwise from Sara." to determine distances between persons. Use clue: "There are 5 people seated clockwise from Ritu to Nandini, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Yash, Nandini, Kabir, Ritu, Harsh, Maya, Sara, Amit Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 95: Square Table (4 sides) — 8 seats

Clues: 1. Aditya sits at the north side of the table. 2. Maya sits immediately to the left of Nandini. 3. Priya is seated between Nandini and Arjun. 4. Nandini sits immediately to the left of Priya. 5. Karan is 3 places clockwise from Nandini. 6. There are 0 people seated clockwise from Maya to Nandini, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits opposite Nandini?
- Who sits immediately to the left of Varun?
- Who sits at position 8 (from left, 1-indexed)?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Aditya sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Maya sits immediately to the left of Nandini." to place adjacent relationships. Use clue: "Priya is seated between Nandini and Arjun." to place adjacent relationships. Use clue: "Nandini sits immediately to the left of Priya." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Karan is 3 places clockwise from Nandini." to determine distances between persons. Use clue: "There are 0 people seated clockwise from Maya to Nandini, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Aditya, Nikhil, Varun, Maya, Nandini, Priya, Arjun, Karan Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 96: Linear (single row, facing North) — 8 seats

Clues: 1. Raj sits at the leftmost end of the row. 2. Pooja sits immediately to the right of Harsh. 3. Lokesh sits immediately to the left of Siddharth. 4. Siddharth sits immediately to the left of Suresh. 5. Suresh is 4 places to the right of Pooja. 6. There are 4 people seated clockwise from Harsh to Suresh, not counting endpoints. 7. Rahul sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits at position 1 (from left, 1-indexed)?
- How many people are seated clockwise from Siddharth to Pooja, not counting endpoints?
- How many people are seated clockwise from Harsh to Pooja, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Raj sits at the leftmost end of the row." to place fixed person(s). Use clue: "Rahul sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Pooja sits immediately to the right of Harsh." to place adjacent relationships. Use clue: "Lokesh sits immediately to the left of Siddharth." to place adjacent relationships. Use clue: "Siddharth sits immediately to the left of Suresh." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Suresh is 4 places to the right of Pooja." to determine distances between persons. Use clue: "There are 4 people seated clockwise from Harsh to Suresh, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Raj, Deepak, Harsh, Pooja, Rahul, Lokesh, Siddharth, Suresh Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 97: Linear (single row, facing South) — 8 seats

Clues: 1. Nandini sits at the leftmost end of the row. 2. Raj sits immediately to the left of Ishaan. 3. Manish sits immediately to the right of Varun. 4. Nandini sits immediately to the left of Priya. 5. Yash is 3 places to the right of Ishaan. 6. There are 1 people seated clockwise from Nandini to Sameer, not counting endpoints. 7. Varun sits exactly in the middle of the row.

Sample Questions (answers in Solutions section):

- Who sits opposite Varun?
- Who sits immediately to the left of Ishaan?
- Who sits immediately to the right of Sameer?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Nandini sits at the leftmost end of the row." to place fixed person(s). Use clue: "Varun sits exactly in the middle of the row." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Raj sits immediately to the left of Ishaan." to place adjacent relationships. Use clue: "Manish sits immediately to the right of Varun." to place adjacent relationships. Use clue: "Nandini sits immediately to the left of Priya." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Yash is 3 places to the right of Ishaan." to determine distances between persons. Use clue: "There are 1 people seated clockwise from Nandini to Sameer, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Priya, Sameer, Raj, Ishaan, Varun, Manish, Yash, Nandini. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 98: Square Table (4 sides) — 8 seats

Clues: 1. Ritu sits at the north side of the table. 2. Nikhil sits immediately to the right of Priya. 3. Chitra sits immediately to the right of Nikhil. 4. Nikhil sits immediately to the right of Priya. 5. Ritu is 4 places clockwise from Shreya. 6. There are 3 people seated clockwise from Chitra to Lokesh, not counting endpoints.

Sample Questions (answers in Solutions section):

- Who sits immediately to the left of Chitra?
- Who sits opposite Lokesh?
- Who sits opposite Priya?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Ritu sits at the north side of the table." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Nikhil sits immediately to the right of Priya." to place adjacent relationships. Use clue: "Chitra sits immediately to the right of Nikhil." to place adjacent relationships. Use clue: "Nikhil sits immediately to the right of Priya." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Ritu is 4 places clockwise from Shreya." to determine distances between persons. Use clue: "There are 3 people seated clockwise from Chitra to Lokesh, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Ritu, Leela, Sara, Lokesh, Shreya, Priya, Nikhil, Chitra. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 99: Circular (facing Outside) — 6 seats

Clues: 1. Rekha is at the 12 o'clock position. 2. Vivaan is seated between Neeraj and Anika. 3. Rekha sits immediately to the right of Anika. 4. Maya sits immediately to the left of Chitra. 5. Vivaan is 3 places clockwise from Maya. 6. Rekha sits opposite Neeraj.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Neeraj?
- How many people are seated clockwise from Maya to Neeraj, not counting endpoints?
- How many people are seated clockwise from Anika to Chitra, not counting endpoints?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Rekha is at the 12 o'clock position." to place fixed person(s). Use clue: "Rekha sits opposite Neeraj." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Vivaan is seated between Neeraj and Anika." to place adjacent relationships. Use clue: "Rekha sits immediately to the right of Anika." to place adjacent relationships. Use clue: "Maya sits immediately to the left of Chitra." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Vivaan is 3 places clockwise from Maya." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Rekha, Maya, Chitra, Neeraj, Vivaan, Anika. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.

Problem 100: Circular (facing Centre) — 12 seats

Clues: 1. Meera is at the 12 o'clock position. 2. Karan is seated between Lokesh and Nandini. 3. Lokesh sits immediately to the left of Karan. 4. Yash is seated between Meera and Raj. 5. Karan is 8 places clockwise from Meera. 6. There are 8 people seated clockwise from Raj to Isha, not counting endpoints. 7. Meera sits opposite Vikram.

Sample Questions (answers in Solutions section):

- Who sits immediately to the right of Yash?
- Who sits immediately to the right of Meera?
- Who sits immediately to the right of Karan?

Solution (concise):

Step 1: Start with an empty layout and fix any absolute positions from clues. Use clue: "Meera is at the 12 o'clock position." to place fixed person(s). Use clue: "Meera sits opposite Vikram." to place fixed person(s). Step 2: Use immediate neighbor clues to place adjacent people relative to fixed ones. Use clue: "Karan is seated between Lokesh and Nandini." to place adjacent relationships. Use clue: "Lokesh sits immediately to the left of Karan." to place adjacent relationships. Use clue: "Yash is seated between Meera and Raj." to place adjacent relationships. Step 3: Use relative position and counting clues to fill the remaining seats consistently. Use clue: "Karan is 8 places clockwise from Meera." to determine distances between persons. Use clue: "There are 8 people seated clockwise from Raj to Isha, not counting endpoints." to determine distances between persons. Step 4: Cross-check all clues to ensure a unique consistent arrangement. The final arrangement is: Meera, Yash, Raj, Kriti, Amit, Ria, Vikram, Lokesh, Karan, Nandini, Ritu, Isha. Therefore the answers to direct queries (e.g., who sits left/right/opposite of X) can be read off this arrangement.
